

- Configurare un «record A» sul server DNS in modo tale da associare il nome «epicode.internal» all'IP del server http

The screenshot shows the dnsmasq configuration window with the 'Services' tab selected. The 'DNS Service' is turned 'On'. Under 'Resource Records', a record is configured with the name 'epicode.internal' and type 'A Record'. The address is set to '192.168.1.5'. A table below shows the configured record.

No.	Name	Type	Detail
0	epicode.internal	A Record	192.168.1.5
